

- MusicPrint -

Personally music means a lot to me, and the primary thing that I like to hear when meeting someone for the first time is his/her music taste. However sometimes I face certain problems, for example: forgetting what was I recommended, what is someones favorite song/artist, what music taste I have in common with someone, etc.

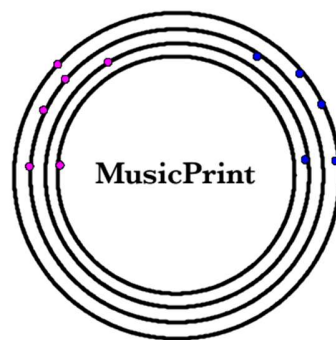

Assuming that others are also facing this problem I propose a mobile application that will make sharing your music taste easier and more fun. The main feature of the app will be an unique MusicPrint which will be easy to share and will contain all information that you consider important.

Things which will be baked into your MusicPrint:

- Your favorite song/artist/album (later referenced as media) - also You will be able to comment why that media in particular)
- Your least favorite media
- Your music taste “progression” - meaning what have You listened in the past
- Your favorite concerts

All of this information will not be necessary, except for the first point. The information will be stored safely and will not be sold to third parties. Only You and the people You allow will have access to it.

After filling the before mentioned data the app will return your unique MusicPrint. The figure below is a prototype.

Different colored dots represent “notes” and their colors links the dot to a certain genre. Therefore just by looking at the MusicPrint the user will be able to figure out the ruff music taste. The MusicPrint will be available to download in different sizes for printing purposes

The application will be developed for Android and iPhone and will ensure that users from different platforms can easily share between each others. By using some of the following technologies (NFC, RFID, Bluetooth or the internet). After the users have successfully shared their MusicPrint between each other, they will have insights about each other. In addition the app will return a graph that will show overlapping music taste.

Having digital well-being in mind, the app will be designed so that you will use as little time as possible, therefore focusing on sharing your experience in an eye-to-eye conversation.
