

MusicPrint - Mockup proposal

MusicPrint app design has simplicity and user friendly design in mind. After the app installation the user is met with the Sign In page where he can sign in with an existing account or create a new account. In the unfortunate case that the user forgot his password he will be able to reset it from here. The figure on the right shows the screen where the user will be able to create a new account and read the Terms of Services and Privacy Policy.

The figure on the left represents an activity in which the user will spend the majority of his screen time on the app. The user will be able to interact with his friends and share music that he is enjoying at the moment. Or in the future updates get notifications and discounts for upcoming events. Navigation between screens will be handled by a slide in menu which will provide shortcuts to all parts of the app. Parts included are: Feed, MusicPrint, Friends, Favorites, Upgrade plans and settings.

On the left we can see the profile section, where the user will be able to update and change his favorite songs, artists or media. Update his/her profile picture and share his/her personal MusicPrint which will make adding people easier. On the right figure a Friends activity can be seen. From here the user will be able to scan other MusicPrints, and check on his/her friends.

The upgrade plans section will enable the user to upgrade his plans and get premium services.
